# DENIED PARTY SCREENING

GTKonnect DPS Features

LISTS

We currently maintain over 190 lists to meet your screening needs. Our content team monitors updates to these lists to ensure the latest content is available when you are ready to screen.

INTEGRATION

We built the DPS program to allow for multiple types of integration. Whether integration is a simple spreadsheet or a fully automated solution with an ERP we can support your need quickly to get you up and running
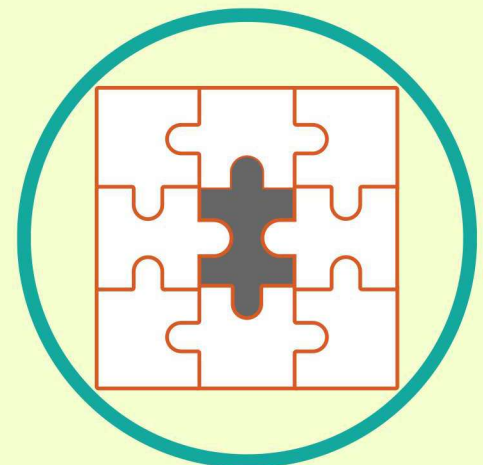

SUPPORT

Support is key. The tool has an online support at your fingertips. But when things get a little more complicated - just click the support button at the top and enter your issue. We have a team that is available to get you an answer.

LOGIC

We have implemented multiple levels of logic to drive your search results. DPS is great but who wants to look at thousands of false hits. We will assist you in making sure the search logic meets your needs so you get the best results.

SAFE LISTS

You ship over and over again to the same parties, yet even with fine tuning we still see some false hits. We can identify parties as "safe" - you check them and make them safe. When lists are updated we can automatically check your "safe list" against those changes and send you the results.
