Our Solutions...Your Success

GTK Trade Data Repository Product Features

GTKonnect Trade Data Repository Module helps streamline Trade Data Repository data management across organization. Trade Data for Vendors, Customers and other Parties that are part of the supply chain can be stored in the GTKonnect Trade Data Repository module and shared with other systems through GTKonnect Integration Module.

Salient Features of GTKonnect Trade Data Repository module:

1. Integration with external applications

- o GTKonnect can easily connect with other applications such as Oracle, SAP, Dynamics etc. to automatically load the master data through the GTKonnect Integration module (URL) using standard APIs.
- o Master data can also be uploaded through a flat file, CSV or excel formats.
- o GTKonnect can also feed data to external systems through standard APIs and custom built integration routines

2. Global Trade Content

- o GTKonnect Trade Data Repository module stores global trade reference data such as HTS, Port codes, State Codes, Country Codes, Currency codes and conversion factors, INCO terms, Units of Measures etc.
- o Denied Party lists, License requirements, ECCN numbers and other details are maintained in the Trade Data Repository module
- o Information on Vendors, Manufacturers, Customers, Other parties that are part of the supply chain is maintained in Trade Data Repository module.

3. US Customs Trade Content

- o GTKonnect Trade Data Repository module can connect to US customs through the ABI link to query and maintain master data related to HTS, Duty rates, Special Programs, ADD/CVD, OGA and other indicators
- o HTS updates published by customs can be immediately downloaded to the Trade Data Repository modules
