Our Solutions...Your Success

GTK Trade Programs Product Features

GTKonnect Trade Programs assists companies operating in dynamic manufacturing environments to make real-time qualification determinations of their fabricated articles for the various trade programs. By applying commodity and country specific rules, GTKonnect Trade Programs analyzes a finished product, through multiple layers of the bill of material, ensuring compliance with Free Trade program regulations in participating countries.

Working in tandem with GTK PRM, GTKonnect Trade Programs promotes peak efficiency by automating the traditionally manual processes of managing vendor correspondence and certification affidavit requests. Utilizing enhanced solicitation features, users may automate the reply process, set reminders, track responses and increase communication efficiency with suppliers.

GTKonnect Trade Programs also provides the ability to more effectively manage customer requests by providing lookups and links to associate customers with finished products, associate customers' product numbers with your finished products, manage certificate production upon customer request, and track responses to such requests.

Salient Features of GTKonnect Trade Programs are:

1. Multiple Rules of origins

GTKonnect Trade Program supports the qualification of the following Trade Programs

- o NAFTA
- o CAFTA-DR
- o Australia
- o Bahrain
